**Style Number:** 9001  
**Service:** Valve Packing  
**Product Type :** Preformed Packing Rings

**Description:**

Industrial grade grafoil tape is wound then die formed into a preformed grafoil ring. Available in solid rings or 45 degree split with or without corrosion inhibitor. Our preforming process compresses each ring to a uniform density, evenly distributing the sealing load throughout the packing set. ABM style 9001 grafoil rings are the ideal sealing solution for your high temperature or pressure applications. Rings may be purchased individually or in sets, and can be used with Style 8000LC or 4000G braided end rings for superior extrusion resistance and sealability.

<b>Construction:</b>	Preformed Industrial Grade Grafoil
<b>Temperature Rating:</b>	850° F    455°C Air 1200 °F    649 °C Steam 6000 °F    3315 °C Non-Oxidizing Atmosphere
<b>pH Rating:</b>	0 – 14 Except Strong Oxidizers
<b>Shaft Speed Rating:</b>	N/A
<b>Pressure Rating:</b>	10,000 PSI / 680 BAR
